

Phase 1

View historical evapotranspiration (ET) at the field level.

- Understand ET data in the context of your farm operations and groundwater pumping
- GSAs track ET data in relation to new groundwater allocation and pumping cap policies

COMING SUMMER 2022

Phase 2

Landowner water bank account.

- Actively and efficiently manage groundwater and surface water supplies within the context of SGMA
- GSA managers access full accounting of water in the subbasin and groundwater billing

Phase 3

Water trading.

- Landowners maximize profitability and optimize long-term asset planning
- Maximum flexibility for landowners under SGMA
- Achieve sustainable groundwater use
