

# Phase 1

**View historical evapotranspiration (ET) at the field level.**

---

- Understand ET data in the context of your farm operations and groundwater pumping
- GSAs track ET data in relation to new groundwater allocation and pumping cap policies

*COMING SUMMER 2022*

# Phase 2

**Landowner water bank account.**

---

- Actively and efficiently manage groundwater and surface water supplies within the context of SGMA
- GSA managers access full accounting of water in the subbasin and groundwater billing

# Phase 3

**Water management tools.**

---

- Landowners maximize profitability and optimize long-term asset planning
- Management tools, including potential water marketing
- Maximum flexibility for landowners under SGMA
